NHÂN HÒA VEGIE

Fresh food Fresh life

ABOUT NHAN HOA VEGIE

Vietnam is one of the countries known for its abundance of crops. The diverse variety of crops also distinguishes itself by its unique flavors. The country's rich agricultural heritage has left an indelible impression on those who have experienced it.

Nhân Hoà Vegie was established with the aim of providing convenience in meal preparation for families. We aim to save time and simplify food processing for housewives. The products under the Nhân Hoà Vegie brand are distinguished by their transparency in terms of information about the growing regions, which is appealing due to their freshness. Through each experience, customers will enjoy a Vietnamese vegetable with a unique flavor.

The products of Nhân Hoà Vegie are characterized by their leadership, transparency, freshness, and professionalism. All of these qualities provide customers with exceptional experiences when they join us.

VISION AND MISSION

Nhân Hoà Vegie aims to become a leading agricultural supplier by 2025, providing high-quality agricultural products that offer convenience to consumers. The company has a well-designed farming network, ensuring transparency in production processes and adhering to national quality standards for agricultural products.

All products are packaged at Nhân Hoà Vegie and are ready for immediate use, minimizing preparation time, and allowing customers to enjoy the freshness of organic farm produce.

PACKING HOUSE

The operation area is certified the ISO 22000 international standard.

The place is divided into separate sections including preparation area, sanitation area, washing area, cold storage area, and finished product packaging area. Each separate area is kept clean and maintained at stable temperature and humidity levels throughout the preparation process.

OUR FACILITY

We take pride in constructing a closed and efficient process.

In accordance with the company's development plan, the processing plant was constructed in a location that is conveniently situated near the raw materials area, as well as close to Hanoi airport and the city center, to fulfill both domestic and international agricultural demands.

To ensure optimal operation, the plant is designed in accordance with the one-way rule, which involves a sequential flow of input materials to finished products, with barrier walls separating the production areas to prevent cross-contamination between them.

The facility is also equipped with labor clothing, air conditioning, manufacturing processes, and detailed instructions for the factory workers, along with the operation of machinery.

SOURCE OF VEGETABLES

Fresh vegetables are selected in standard gardens

5

Biophap Kontum

The organic garden produces a variety of high-quality products in accordance with the most rigorous organic standards.

The organic garden includes organic peppers, kale, beans, peppermint, onions, carrots, strawberries, fresh ginger, etc...

Kim Son Dong Anh garden

The organic garden employs natural and biologically-based methods to manage fungal diseases in its crops.

Contrary to popular belief, organic garden vegetables do not typically include swam spinach, malabar spinach, sweet potato buds,...

SOURCE OF FRESH FRUITS

The fruit undergoes a closed process of harvesting, processing, and preparation.

6

Thanh Ha Lychee garden

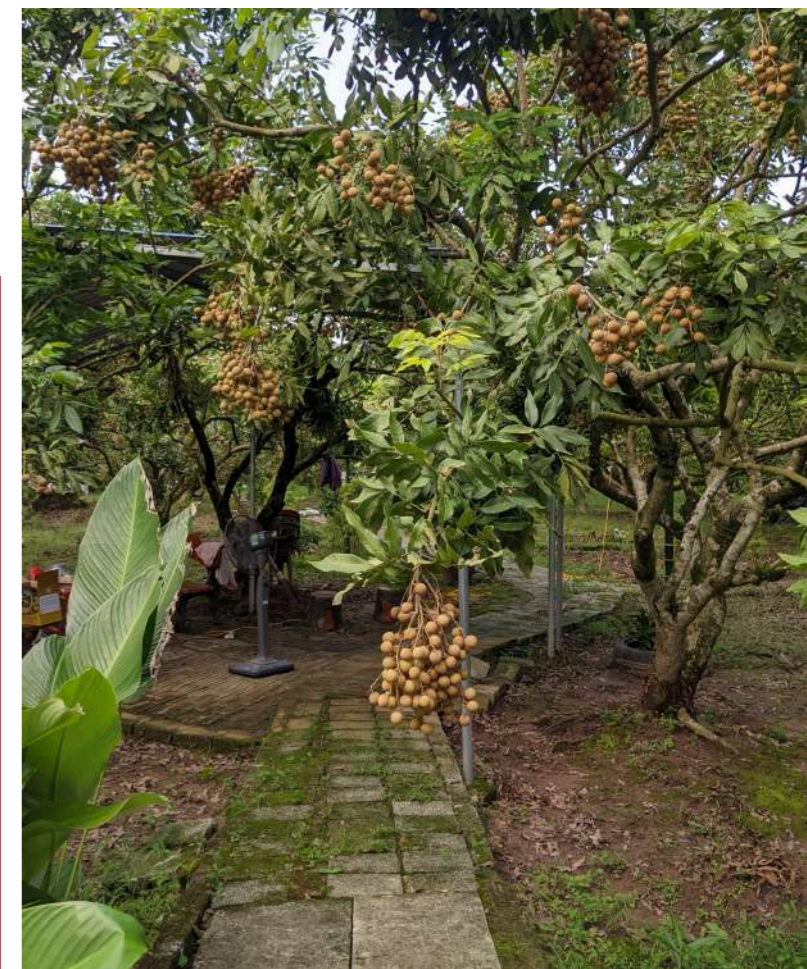

The Lychee garden holds the Global Gap certification, allowing for export to numerous countries worldwide.

The Lychee garden in U Hong follows natural organic farming methods and a strict cultivation process adhering to stringent standards.

Hung Yen Longan garden

Hong Nam, Hung Yen guarantee that chemical fertilizers are not employed during the plant growth process. Instead, farmers utilize bio-fertilizer preparations like fish waste, fermented soybeans,...

In place of chemical pesticides, natural remedies such as ginger, garlic, chili, and alcohol are utilized to prevent fungal diseases.
